“Learning never exhausts the Mind.” — Leonardo da Vinci

## Summary

Master's degree student in Computer Science excited to begin his thesis work as the final step toward completion of studies. Curious about cloud-native solutions and system design in general. Interested in experimenting with and learning about cutting-edge technologies, tools, and paradigms.

## Skills

**Programming** Python, Java, JavaScript, C, Solidity  
**Technologies** SQL (MySQL, PostgreSQL), MongoDB, Elasticsearch, GraphQL, Node.js, NGINX, Bash, Git, Docker, Kubernetes  
**Languages** Italian (native), English

## Education

### Master's degree in Computer Science

Trento, Italy

UNIVERSITY OF TRENTO

Sep. 2021 — Expected Mar. 2024

- Current grade point average: 30/30
- Relevant courses: Distributed Systems, Cloud Computing, Web Architectures, Security Testing, Blockchain, Data Mining, HPC
- Theses: Design of a SaaS ↗

### Bachelor's degree in Computer Science

Trento, Italy

UNIVERSITY OF TRENTO

Sep. 2018 — Sep. 2021

- Grade: 106/110
- Relevant courses: Algorithms & Data Structures, Software Engineering, Operating Systems, Databases, Networks, ML

## Work Experience

### FIPIC – Italian Wheelchair Basketball Federation

Rome, Italy (Remote)

SOFTWARE ENGINEER INTERN - BACKEND

Feb. 2021 — Jun. 2021

- Co-led a team of 4 for the creation of a historical data and multimedia archive of the Federation, reducing the estimated project completion time by 50% through the adoption of a customer-centered development.
- Gathered functional and non-functional requirements from different technical and non-technical stakeholders in order to design a system consisting of multiple components.
- Contributed in the design of a pipeline based on the ELK stack to achieve dynamic data visualization and in-depth analysis.
- Designed and implemented RESTful APIs to perform CRUD operations against a MySQL database using Node.js with Express.
- Created a multimedia collector component by leveraging Google Drive APIs and OAuth 2.0 authentication.
- Deployed and configured the entire system on a dedicated Ubuntu server using NGINX, UFW and PM2.

## Projects

### Digital watermarking tool ↗

Python (OpenCV, NumPy)

TEAM LEADER - SOFTWARE ENGINEER

Oct. 2022 — Nov. 2022

- Developed a DWT-SVD-based digital watermarking suite as part of a university competition on multimedia data security.
- Proposed the project workflow in order to meet the functional requirements of the produced code within the restricted time constraints imposed by the competition rules.
- Analyzed literature related to SOTA watermarking techniques and devised algorithms to achieve a robust and invisible watermark embedding that resulted the second best in the competition in both metrics.

### Convex hull parallel solver ↗

C (MPI, OpenMP)

SOFTWARE ENGINEER

Nov. 2022 — Dec. 2022

- Ported a C++ implementation of a serial algorithm solving convex hull problem into C source code.
- Designed and implemented a parallel algorithm exploiting MPI and OpenMP libraries.
- Submitted jobs on the HPC cluster @UniTrento with shell scripts exploiting different PBS configurations to find the best performance of the parallel implementation.
- Tested parallel implementation on various input sizes and compared results to serial implementation, finding improved performance in terms of speedup and efficiency.
